

Jamb Type Hardware

The jamb type fitting opens using only a jamb mounted power arm meaning no ceiling fixings are required. When the door is in the open position, approximately half of the door protrudes out of the opening meaning that much less “back clearance” required for the door and automatic operator. Maximum weights and sizes are less than for the Track type.

Side room: 50mm

Headroom manual: 25mm*

Headroom Automatic: 120mm*

Track Type Hardware

The Track type hardware opens using a top wheel and track in addition to a jamb mounted power arm. This gives the door a smoother operation, better suited for automation. When the door is in the open position, it retracts fully into the garage and has weather seals down the jambs. The Track type has greater size and weight capacity. Please consult with us for maximum weights and sizes.

Side room: 75mm

Headroom manual: 70mm*

Headroom Automatic: 120mm*

*In addition to the required headroom, doors will sit under the head when open – walk-in height will be reduced by the door thickness and trusses plus clearance of 10mm. Please consult us for your specific requirements.
